Turbo White Technology

The first group of the "CONFIDENT" oral care products includes toothbrushes with specially-designed nylon-based filaments in which the "end-rounded" quality has been improved effectively and in addition the water absorption factor has been decreased by %20 which leads to a better stiffness bristles during brushing.

The exclusive symbol of "Turbo White" represents the nylon-based toothbrushes produced by the company.

CT-Bristles Technology

Traditionally nylon-based filaments have been used in all kinds of toothbrushes throughout the world for a nylon-based filament, the head of the filament is at most %20 thinner than the base.

On the other hand, CT-Bristles which were developed with a new technology in Japan, are up to %95 thinner at the head than at the base.

With these super-slim bristles, the possibility of penetration into the dense interdental space is easily provided and any mass, plaque and residual food can be perfectly cleaned from the teeth surfaces. The benefits of CT-Bristles are:

- Lighter weight which causes less pressure on the tooth enamel while massaging the gums.
- More surface clearance due to the higher number of bristles.
- Less water absorption (stronger filament's strength)
- Better bend recovery
- Unique color variation
